Learning the portfolio Sharpe ratio | $\rho = 0.5$

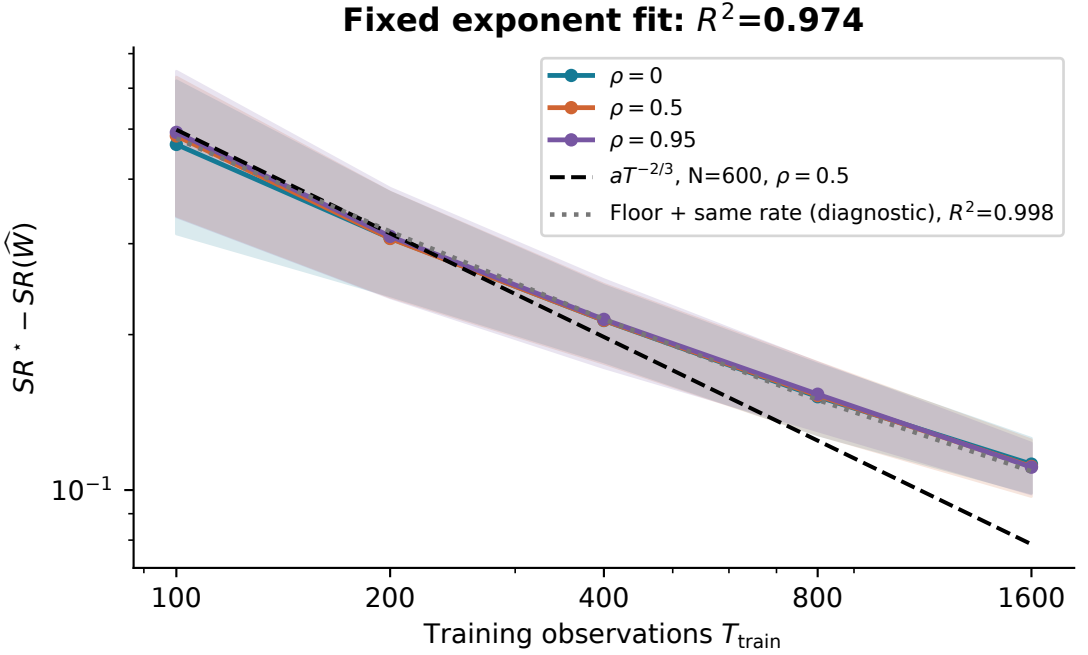

100 replications per cell; bands/error bars: mean +/- 1 standard deviation. Fits use the full prespecified window.

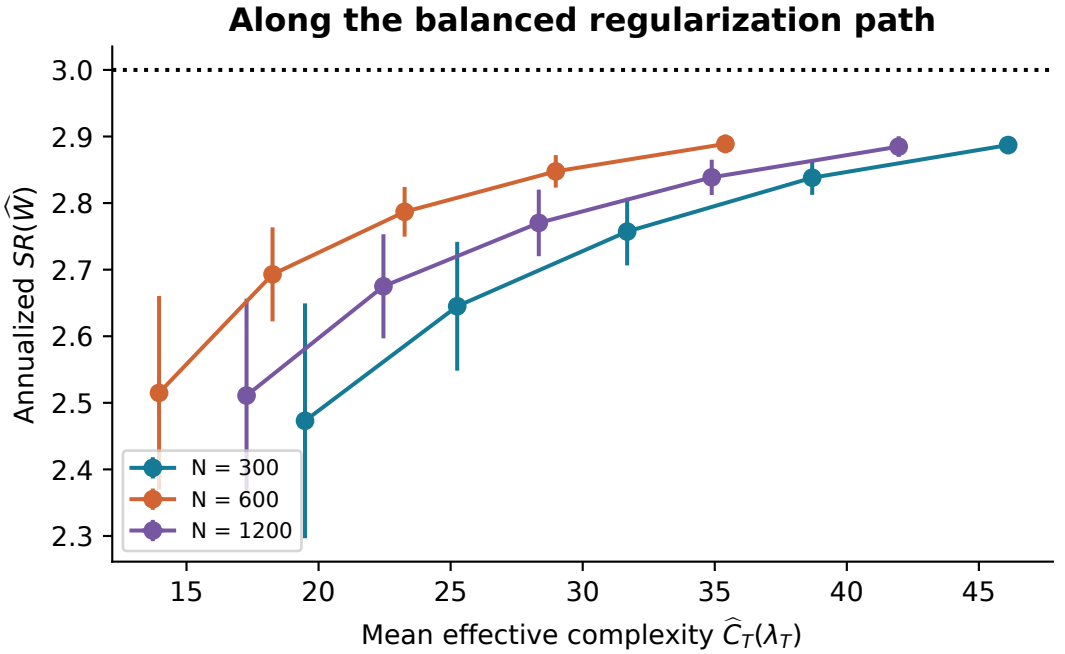

Learning the portfolio Sharpe ratio | $N = 600$

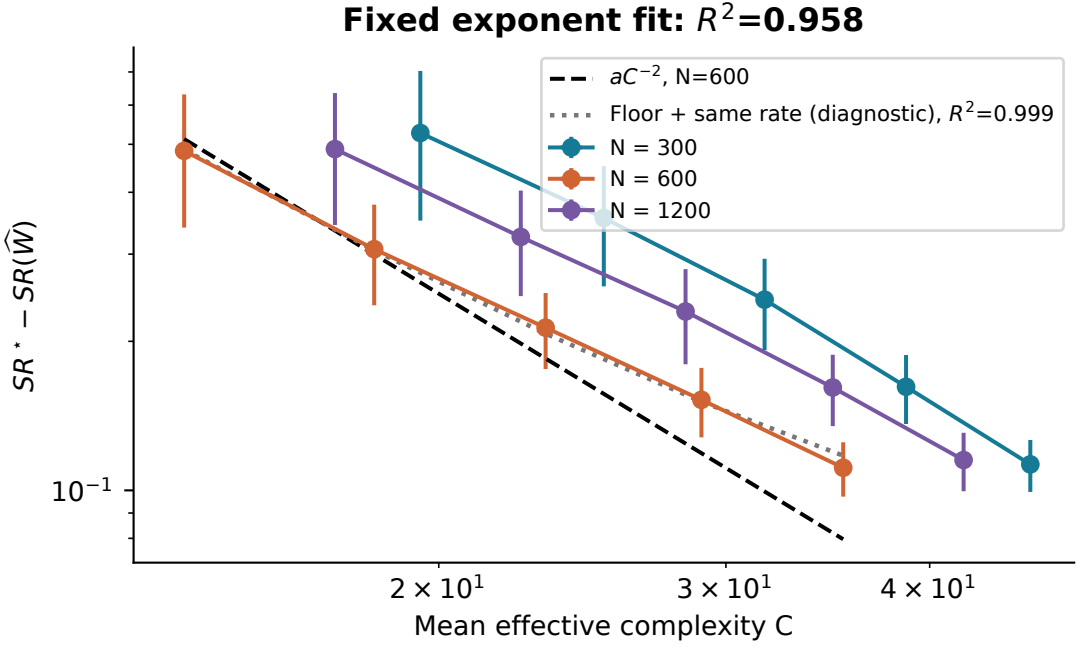

100 replications per cell; bands/error bars: mean +/- 1 standard deviation. Fits use the full prespecified window.

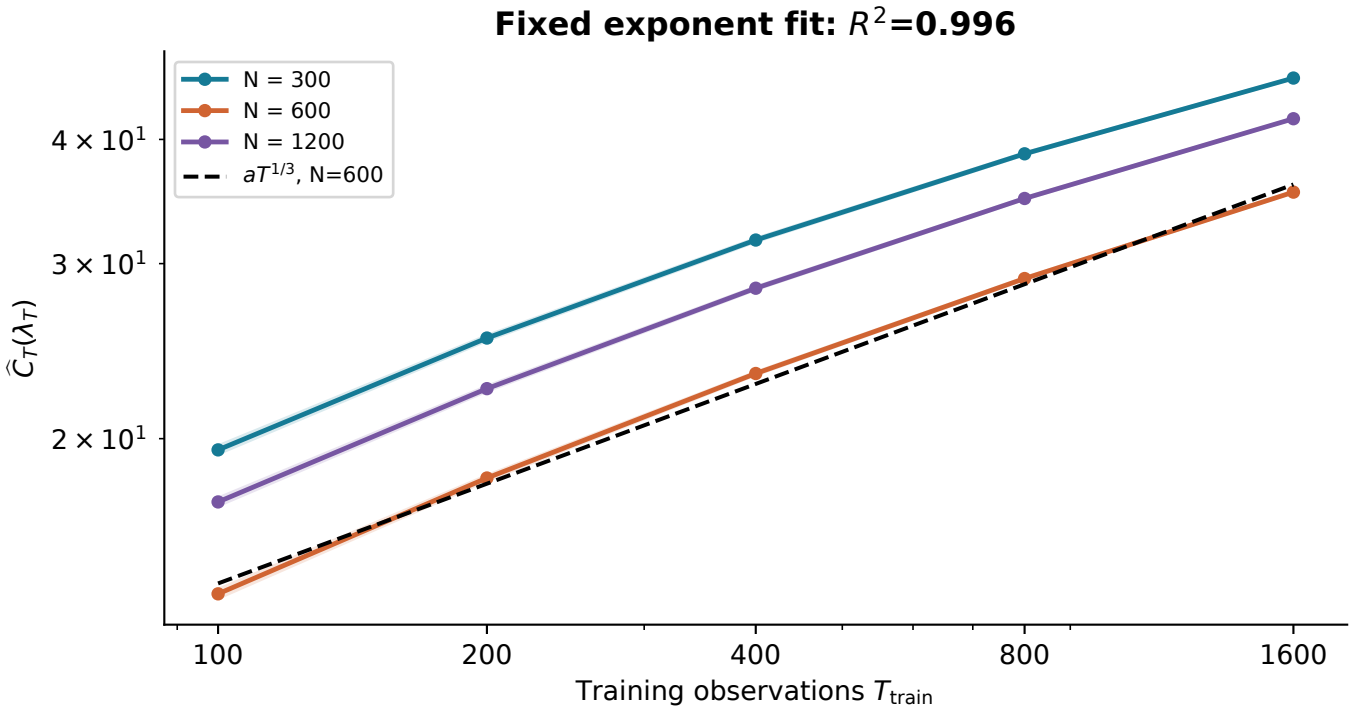

Sharpe and effective complexity | $\rho = 0.5$; points increase in T

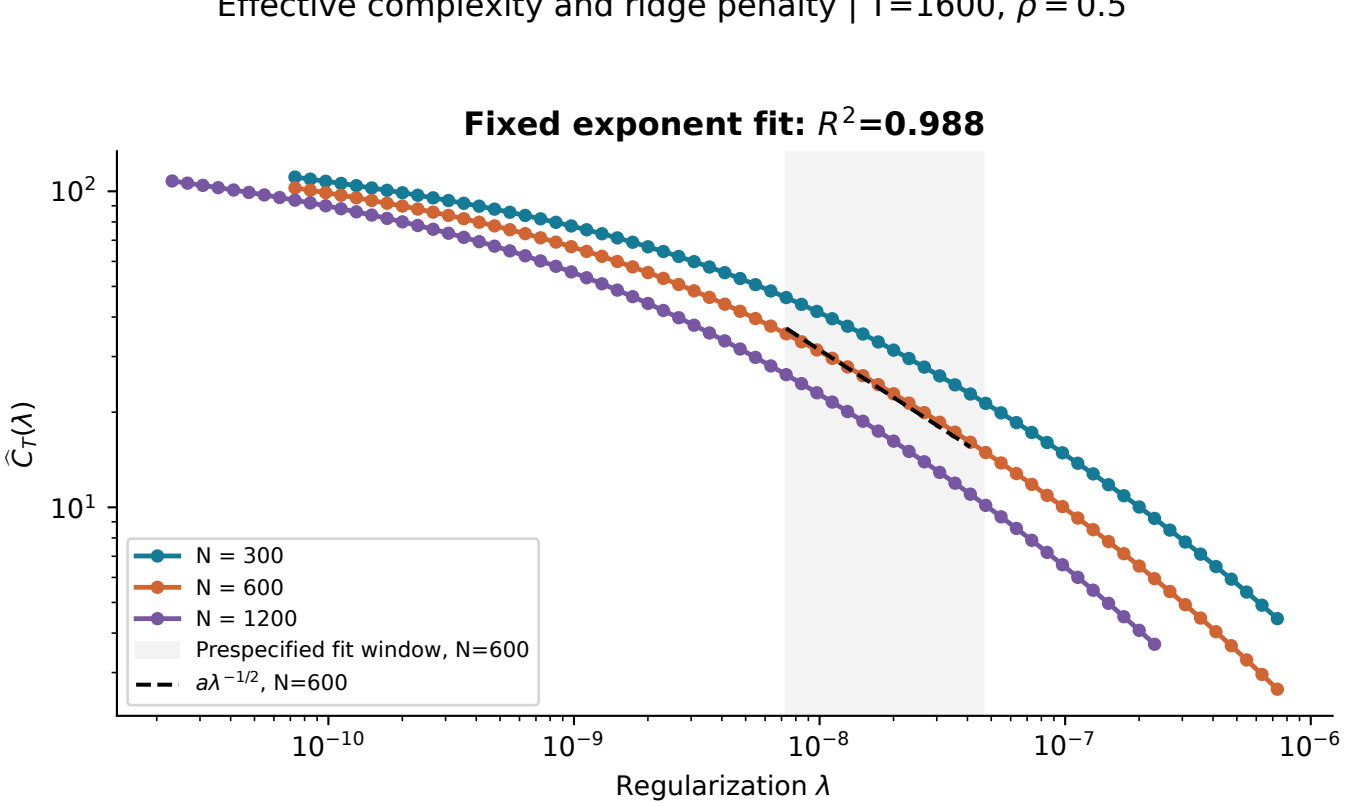

100 replications per cell; bands/error bars: mean +/- 1 standard deviation. Fits use the full prespecified window.

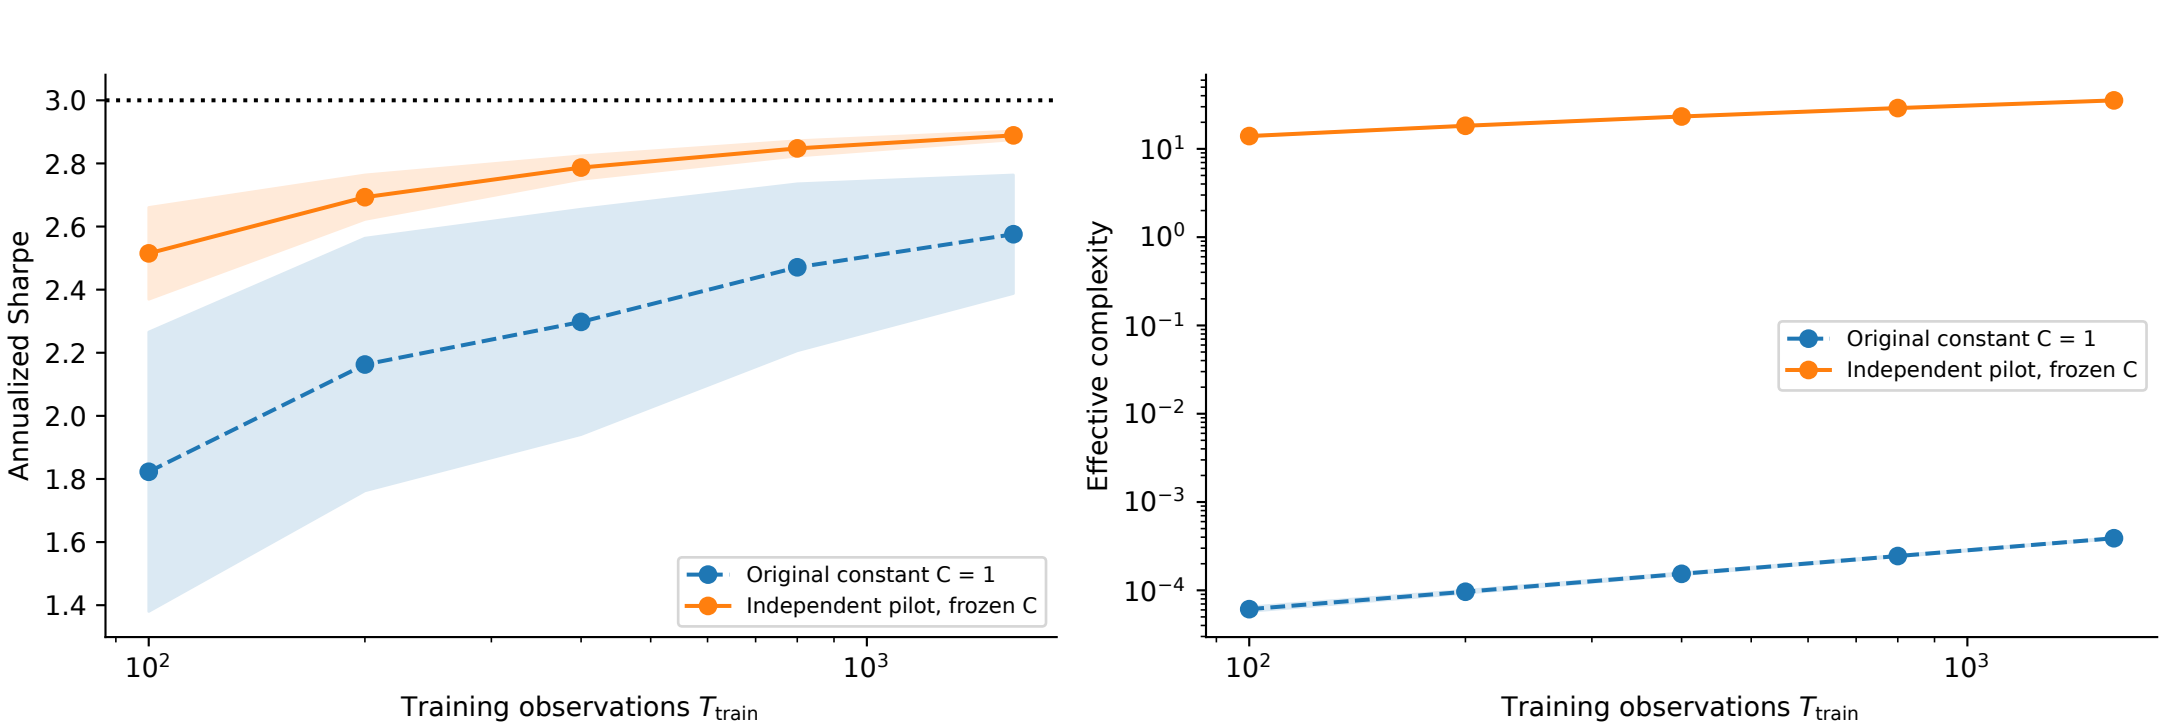

Effective complexity and history | $\rho = 0.5$

100 replications per cell; bands/error bars: mean +/- 1 standard deviation. Fits use the full prespecified window.

100 replications per cell; bands/error bars: mean +/- 1 standard deviation. Fits use the full prespecified window.

100 replications per cell; bands/error bars: mean +/- 1 standard deviation. Fits use the full prespecified window.
