
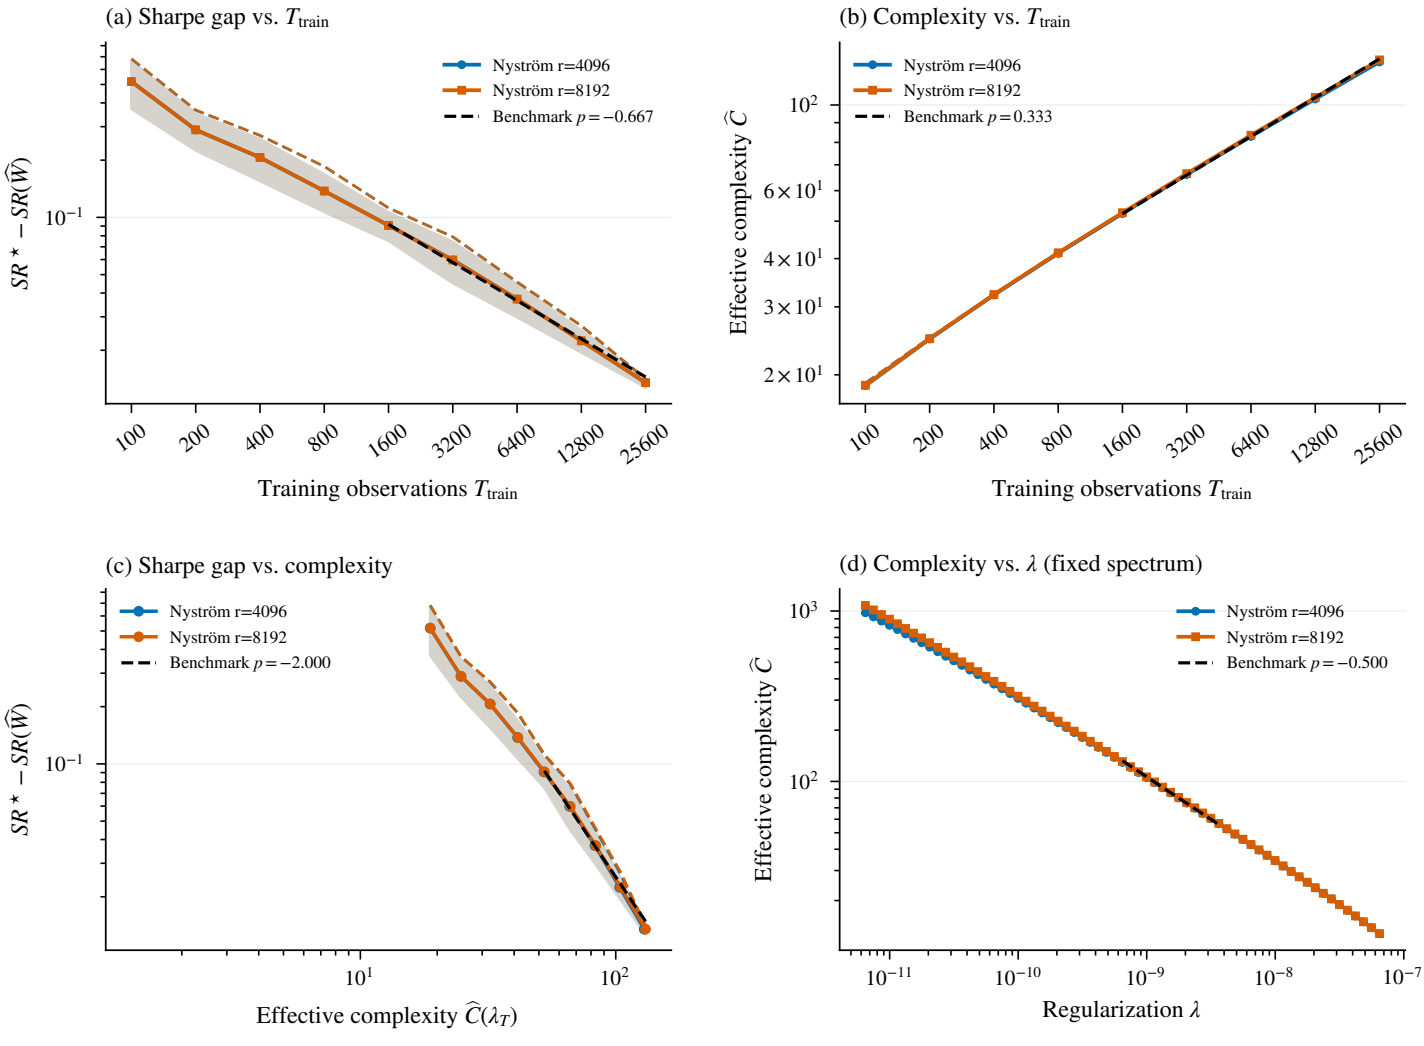
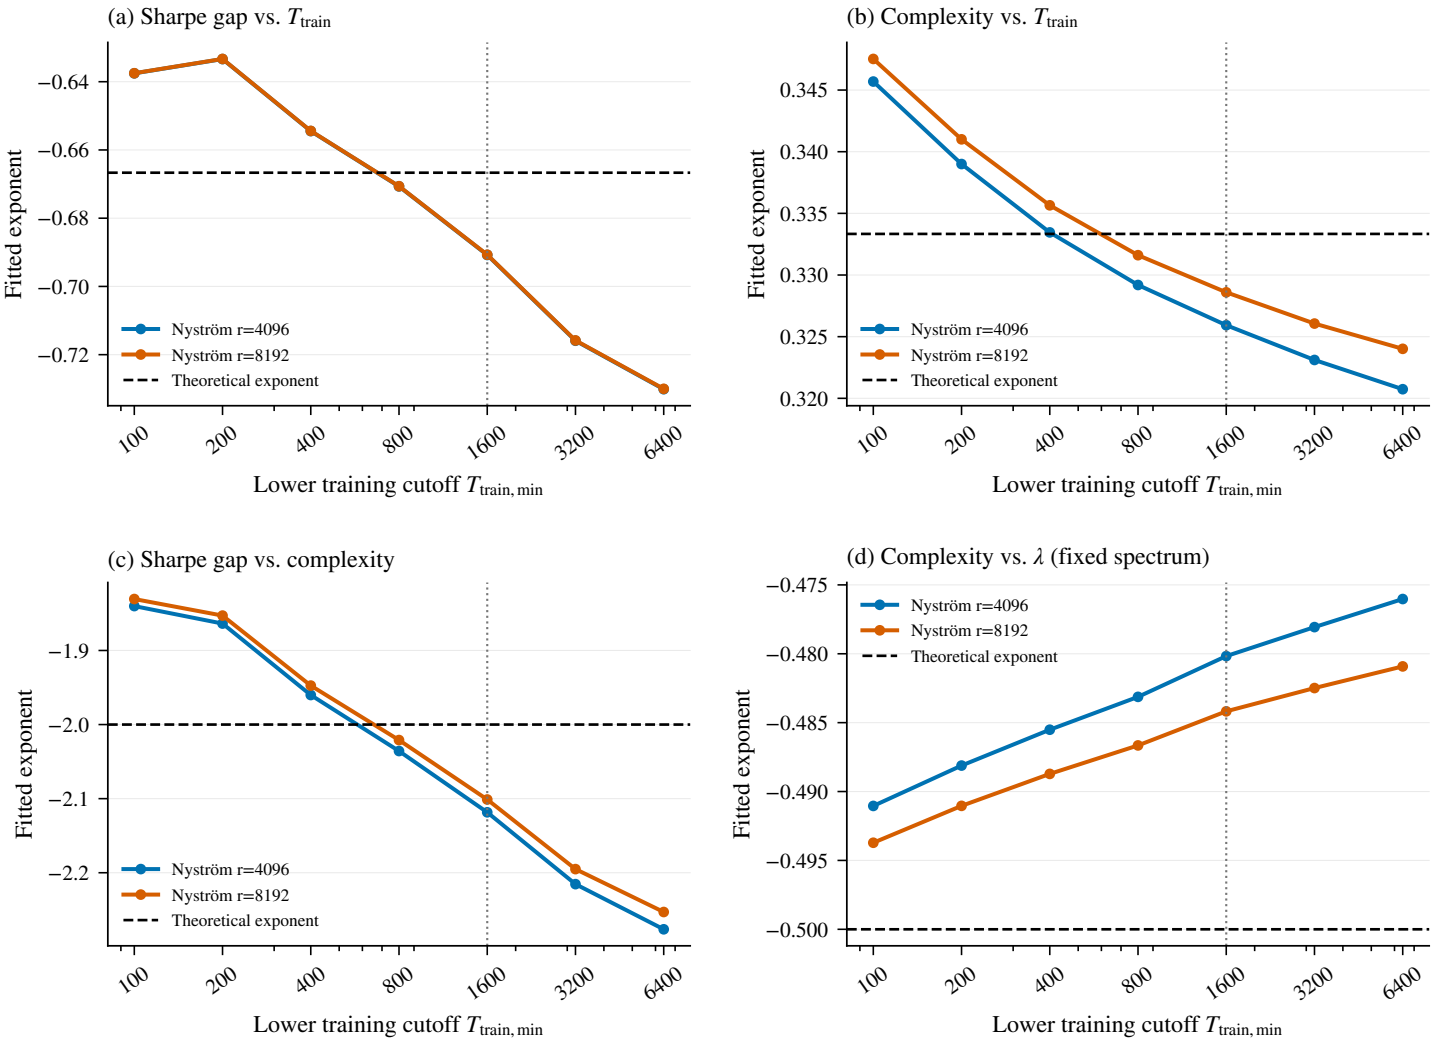
8 paired pilot replications; N=600, $\rho = 0.5$. Solid: mean; shading/bars: ± 1 SD; colored dashes: empirical 95th percentile.
Complexity and Sharpe are paired at the same training T; the Sharpe percentile is placed at mean complexity.



8 paired pilot replications; N=600, $\rho = 0.5$. Solid: mean; shading/bars: ± 1 SD; colored dashes: empirical 95th percentile.
Benchmark amplitude: certified rank 8192; main fit starts at T_train=1600; spectrum T_train=25600.



Every prespecified cutoff is shown; no window or rank is selected by its slope or fit quality.
For complexity vs. lambda, the cutoff defines a lambda interval on the same fixed training spectrum.
