Learning the portfolio Sharpe ratio | $\rho = 0.5$

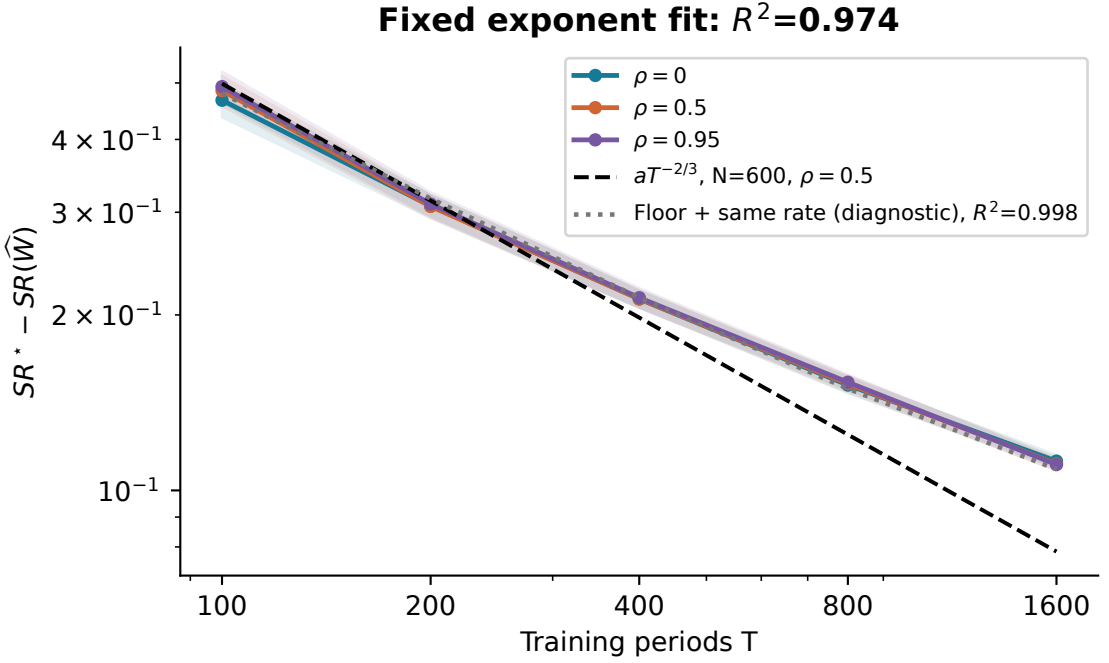

100 replications per cell; bands: 95% Monte Carlo intervals. Fits use the full prespecified window.

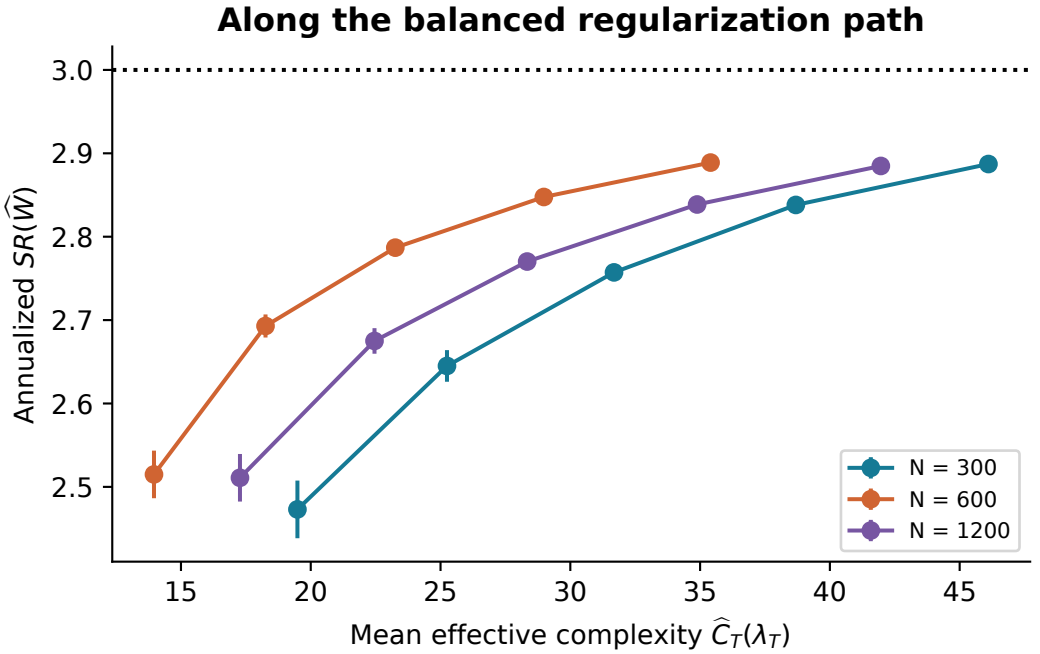

Learning the portfolio Sharpe ratio | $N = 600$

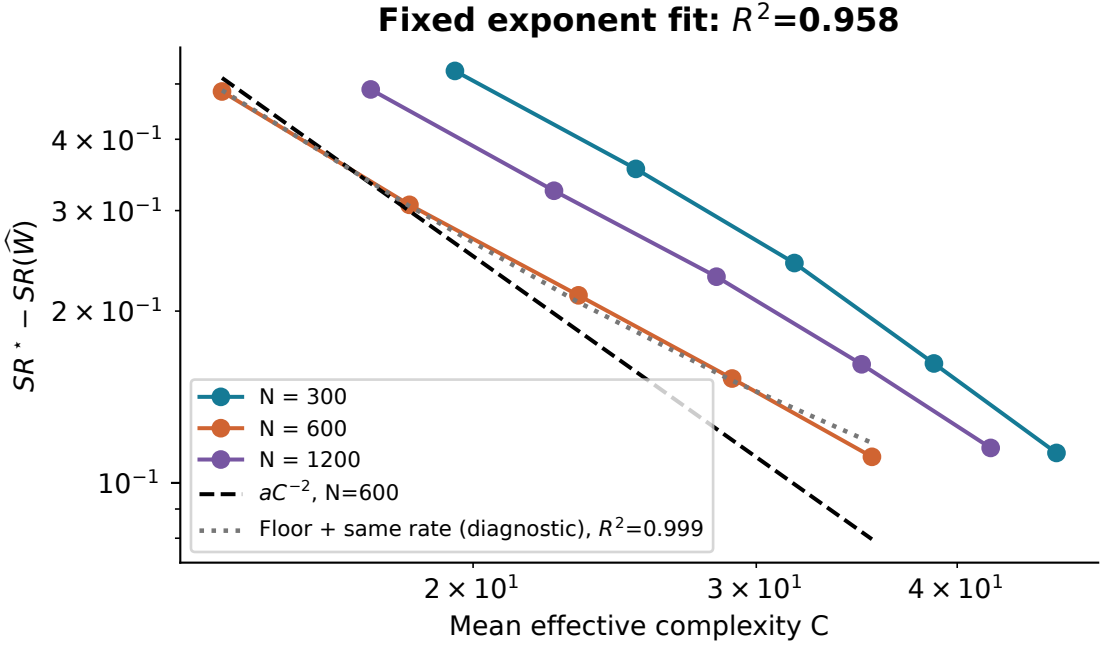

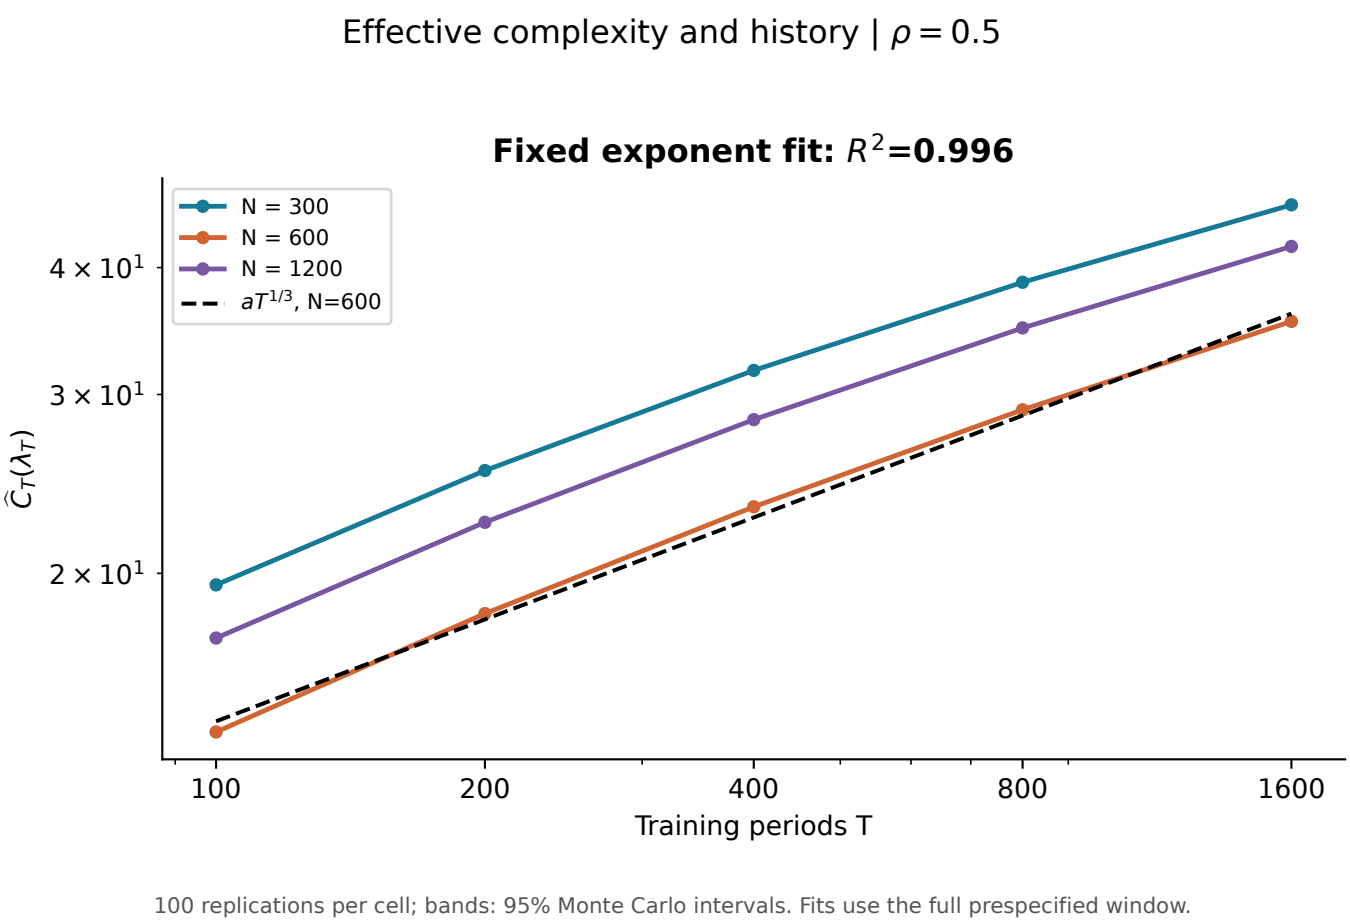

100 replications per cell; bands: 95% Monte Carlo intervals. Fits use the full prespecified window.

Sharpe and effective complexity | $\rho = 0.5$; points increase in T

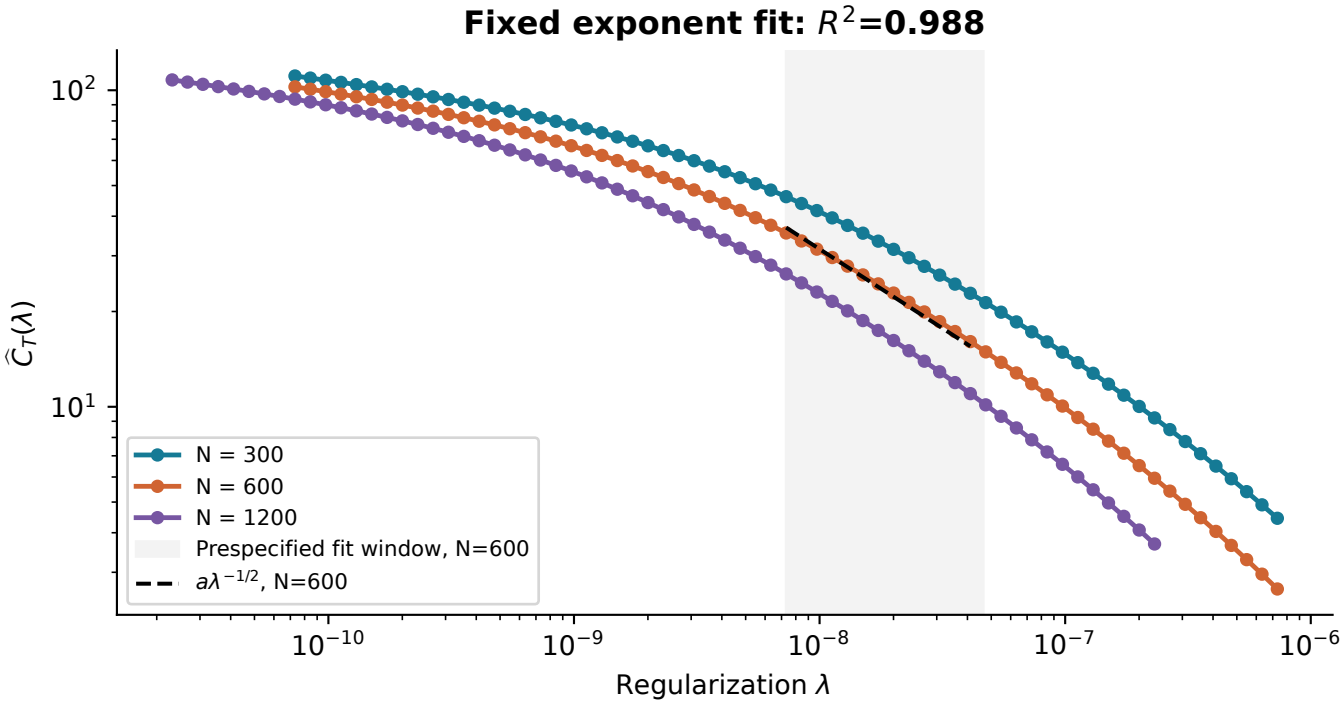

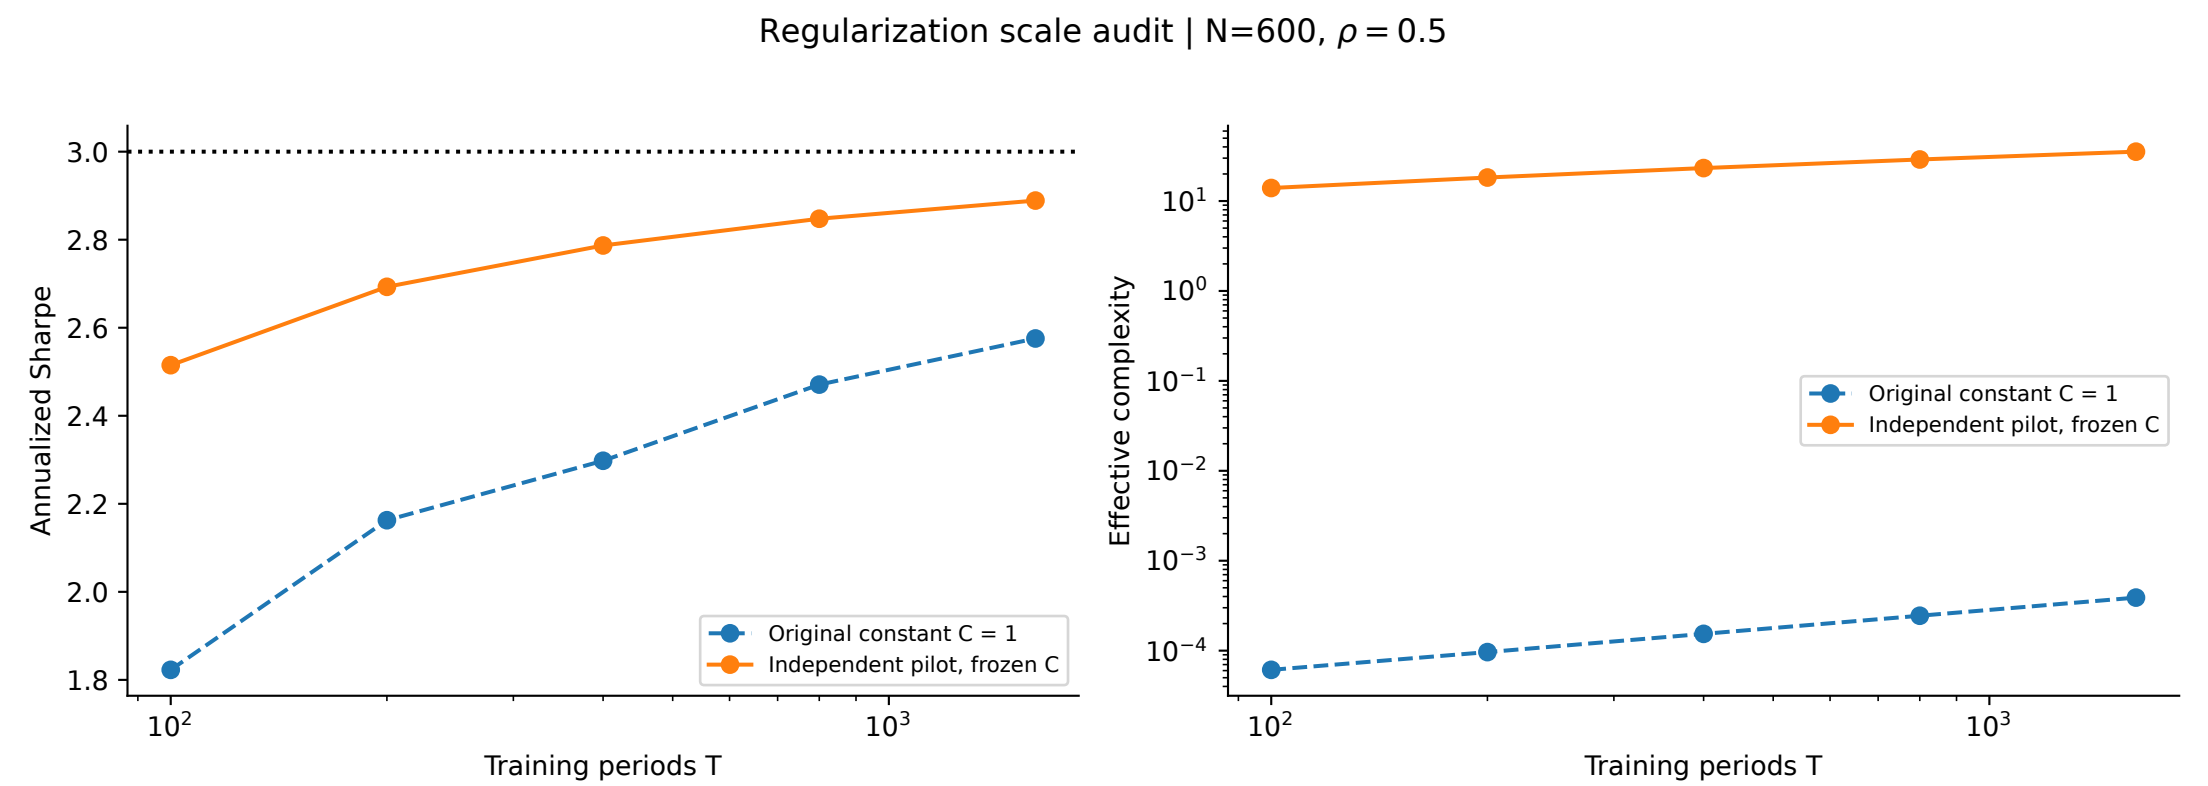

100 replications per cell; bands: 95% Monte Carlo intervals. Fits use the full prespecified window.

Effective complexity and history | $\rho = 0.5$
